COINYATRA TOKEN / CYT

CYT Ecosystem Whitepaper

A clear framework for digital-asset participation, live CYT Mining, permanent Mining Power and distinct token access pathways.

1 BILLION	200 MILLION	6H / 3H
SUPPLY FRAMEWORK	MINING ALLOCATION	FREE / PAID CYCLES

VERSION 2.0 • 13 NOVEMBER 2026

A programme policy and ecosystem disclosure

01 / CYT WHITEPAPER

The CYT programme at a glance

Live reward mechanics, programme limits and user access dates in one view.

1 CYT
FREE / 6 HOURS

1 + POWER
PAID / 3 HOURS

75 CYT
NEW FREE-MINER CAP

Executive perspective

CoinYatra connects exchange services with a distinct CYT Mining Programme. Version 2.0 records the mining rules implemented on 13 November 2026 while retaining the token-supply framework and underlying ecosystem narrative from Version 1.1.

TWO CLEAR ACCESS PATHWAYS

Purchased Mining Power owners: beginning 14 March 2027, eligible mined CYT may be converted monthly within a 10%-15% allowance at **INR 12 per CYT** under the programme rules. **Free miners:** no early monthly INR/USDT conversion; eligible mined tokens become available for direct CYT token access from **26 November 2027**.

Publication status and interpretation

- **Live rules:** the 6-hour free cycle, 3-hour purchased-power cycle, immutable personal free-mining caps and permanent power entitlements are presented as active programme mechanics.
- **Programme dates:** the token launch, March conversion facility and November token release are forward-looking programme milestones until their respective services commence.
- **Token supply:** 1 billion CYT maximum and 200 million CYT mining allocation are the retained supply framework, not a statement of on-chain circulating supply.

Version 2.0 supersedes older generic references suggesting that every miner qualifies for monthly conversion from 14 March 2027.

02 / CYT WHITEPAPER

What changed in Version 2.0

A controlled revision of the original document rather than a change to historical CYT earnings.

TOPIC	VERSION 1.1	VERSION 2.0
Free Mining	3-hour cycles	1 CYT every 6 hours
Mining Power	Paid increment described with older cycle language	1 CYT + owned power every 3 hours
Free caps	Historical cohort caps 75 / 275	Personal fixed caps: 75, 150, 200, 250, 275
Power rate	Older USD 30 quotation	USD 40 / +1 CYT, checkout governs
March 2027 conversion	Broadly described for eligible miners	Only eligible Mining Power owners
Conversion price	INR 12 floor; higher market-price clause	INR 12 per CYT for paid early conversions
Free miner release	Generic November access statement	Direct CYT from 26 November 2027

PROTECTION OF EARLIER EARNINGS

Already credited CYT, historical mining cycles, existing purchased power, earned rewards and valid pre-activation entitlements are not retroactively reduced by this documentation update.

The updated conversion eligibility and fixed INR 12 early-conversion rate are owner-specified programme policies for this version. The published user terms and actual product eligibility screens should be aligned before release.

03 / CYT WHITEPAPER

An integrated digital-asset experience

The token programme sits within CoinYatra's larger exchange, security and support environment.

CoinYatra is an India-first digital-asset platform bringing account verification, supported cryptocurrency markets, INR-facing journeys, P2P trading, swaps, wallets, transaction histories and customer assistance together within a connected account experience.

MARKETS & EXCHANGE

Supported spot market orders, order status and transaction records; asset swaps with displayed quotes and charges.

P2P & INR JOURNEYS

Buyer-seller processes, dispute handling and INR-linked experiences according to eligibility and platform safeguards.

WALLETS & HISTORY

Balances and holdings distinguish available and restricted assets, transaction origin, and completed transfers.

KYC & SUPPORT

Account verification, risk-aware checks, responsive help channels and escalation to the human support team.

Where CYT adds value

CYT introduces an identifiable native token programme with manually initiated mining cycles, server-confirmed rewards, personal free-mining caps and an optional perpetual Mining Power increment. The separate CYT Mining Balance is distinct from normal deposit, trading and fiat balances.

ONE ACCOUNT, DIFFERENT RULES

Services such as P2P, swaps, earn, gold and investments remain distinct products. Their separate permissions, asset restrictions, fees and risks do not disappear simply because a user participates in CYT Mining.

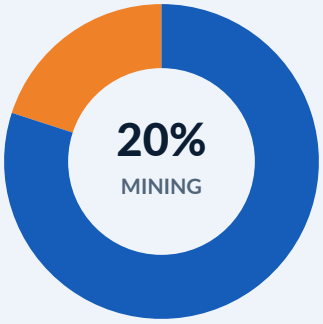

AI-powered chat and voice guidance complement, but do not replace, KYC, authorisation, transaction confirmations or human support.

04 / CYT WHITEPAPER

CYT identity and token supply

The retained tokenomics framework separates maximum supply, the mining allocation and actual circulating tokens.

FRAMEWORK ITEM	CYT AMOUNT	SHARE
Maximum supply framework	1,000,000,000	100%
Mining Programme allocation	200,000,000	20%
Other allocations	800,000,000	80%

200M CYT
Mining Programme allocation

800M CYT
Other allocation categories

Network and token status

- **Name and ticker:** CoinYatra Token (CYT).
- **Intended network:** Solana SPL. The canonical mint address, mint authority, freeze authority and deployment verification should be published through official CoinYatra channels.
- **Allocation transparency:** detailed treasury, ecosystem, liquidity, team, partnership, vesting and reserve categories within the 80% balance require separate final disclosure.
- **Supply integrity:** maximum supply must never be confused with issued, circulating, unlocked or withdrawable CYT.

SUPPLY IS NOT A PRICE

No token listing, exchange market depth, official tradeable price or circulating-supply figure is established by this supply graphic. Any confirmed launch data must be announced separately.

05 / CYT WHITEPAPER

Free Mining: one CYT per six hours

Current production reward mechanics implemented on 13 November 2026.

6-HOUR CYCLE

Eligible free miners can start a new cycle manually. The cycle must complete before a server-confirmed reward is credited.

1 CYT BASE REWARD

The full 1 CYT applies to an eligible completed cycle, except where the personal remaining cap requires a smaller final reward.

How a free mining cycle works

01

Join and verify

Maintain an eligible account, complete KYC and accept the applicable Mining Terms.

02

Start mining

Activate the cycle using the authenticated CYT Mining page.

03

Complete six hours

The displayed timer and server-recorded cycle completion are used to determine readiness.

04

Receive CYT credit

On valid settlement, CYT is added to the Mining Balance; the next cycle starts only when initiated.

TRANSITION PROTECTION

Cycles already running at the 13 November 2026 activation retained their original three-hour duration and promised reward. New free cycles follow six-hour timing. Earlier earned CYT is not confiscated.

Free participation remains subject to the individual lifetime cap shown in the user dashboard. Referral and welcome rewards are not counted as lifetime mined CYT for this cap.

06 / CYT WHITEPAPER

Personal lifetime free-mining caps

Each free miner receives one fixed cap based on cumulative eligible mining rewards at the initial assignment.

LIFETIME CYT AT ASSIGNMENT	FIXED FREE CAP	ILLUSTRATIVE
Below 75 CYT	75 CYT	50 earned → stop at 75
75 to below 150 CYT	150 CYT	110 earned → stop at 150
150 to below 200 CYT	200 CYT	167 earned → stop at 200
200 to below 250 CYT	250 CYT	221 earned → stop at 250
250 CYT or more	275 CYT*	250 earned → stop at 275

* Any miner already at or above 275 CYT when assigned the last tier has no further free cycles. These allocations are fixed, not level-ups.

Important interpretation

- **New Mining participants:** assigned a permanent 75 CYT free-mining cap upon joining.
- **No automatic tier advancement:** earning 75 CYT does not unlock a 150 CYT allowance. A cap is assigned once and does not increase after being reached.
- **Partial final reward:** if only 0.4 CYT remains under the assigned cap, a newly started eligible cycle may credit only 0.4 CYT at valid completion.
- **Existing cycle exception:** a legitimate pre-activation cycle may retain its promised reward even if that settlement goes just above the newly assigned cap; no further free cycle can start.
- **Excluded from the cap:** welcome bonuses, referral earnings and current wallet balance. Active purchased-power users are exempt from free caps.

WHEN THE FREE LIMIT IS REACHED

The Mining Dashboard directs users to **Upgrade Mining Power to Continue Mining**. A successful purchase enables the paid three-hour mining rules from the next applicable cycle.

07 / CYT WHITEPAPER

Mining Power: a permanent upgrade

Purchased power is added to the base reward for eligible three-hour paid mining cycles.

Mining Power is an optional, one-time purchase of extra CYT earning capacity per eligible paid cycle. It does not expire, require monthly renewal or become invalid merely because new purchases may later cost more.

OWNED EXTRA POWER	BASE / 3 HOURS	TOTAL / 3 HOURS
+0.3 CYT	1.0 CYT	1.3 CYT
+1.0 CYT	1.0 CYT	2.0 CYT
+3.0 CYT	1.0 CYT	4.0 CYT
+5.0 CYT	1.0 CYT	6.0 CYT

$40
CURRENT PRICE / +1 CYT

+7 CYT
PUBLISHED POWER LIMIT

3 HOURS
PAID CYCLE DURATION

Benefits and protections

- Per-cycle reward: **1 CYT base + previously purchased power**, with the owned increment retained during the operating life of the programme.
- Paid Mining Power owners are not subject to their previous free-mining lifetime cap while their paid entitlement is valid.
- Purchasing during an active free cycle does not rewrite that cycle; paid timing and reward rules apply to the next eligible cycle.
- Purchasers receive access to **priority phone-support handling for eligible CYT Mining matters** according to support policies.
- Current pricing is **US$40 per new +1 CYT** increment; supported fractional purchases, payment assets and final charges are displayed before checkout. Existing purchases are not repriced.

Mining Power is a programme-capacity upgrade, not an outright CYT token purchase, equity stake, interest-bearing deposit or promise of a secondary market.

08 / CYT WHITEPAPER

Two distinct token access pathways

Version 2.0 establishes separate timing for purchased Mining Power participants and free-only miners.

MINING POWER PARTICIPANT

Purchased upgrade, eligible mined balance

14 MAR 2027 • EARLY CONVERSION

10%-15% monthly; INR 12/CYT; INR or USDT (BEP20)

Separate programme eligibility and security conditions apply.

FREE-ONLY MINER

Free cycles without purchased power

26 NOV 2027 • CYT TOKEN ACCESS

Eligible mined CYT released directly as CYT tokens

Separate programme eligibility and security conditions apply.

Shared milestones

The retained token-launch milestone is **1 February 2027** on the intended Solana SPL network, with official mint and supported services to be announced. Both user groups retain their valid mined CYT records. From **26 November 2027**, direct CYT token access is the stated route for eligible balances under the published withdrawal process.

MARCH IS NOT A GENERAL FREE-MINER CASHOUT

The 14 March 2027 INR / USDT early-conversion service is reserved for eligible Mining Power owners; free-only miners do not receive this facility. This policy corrects earlier, broader language in Whitepaper v1.1.

09 / CYT WHITEPAPER

Early conversion for Mining Power owners

Effective programme date: 14 March 2027. Eligibility is based on an active, valid purchased Mining Power entitlement.

CONVERSION RATE

INR 12 per eligible mined CYT. The stated conversion rate is applied to qualifying monthly INR bank-payout or USDT (BEP20) conversion requests under CoinYatra's programme terms. This is a platform conversion rate, not a claim about exchange-market trading price.

Monthly allowance: 10% to 15%

A qualifying upgraded miner may request conversion of **10% to 15% of the applicable eligible mined CYT balance each month**. The exact available percentage within this range follows the published account-level programme allowance. The combined INR and USDT conversion volume must not exceed the relevant monthly limit (maximum 15%).

EXAMPLE BALANCE	MONTHLY CYT RANGE	INR AT ₹12 / CYT
100 eligible CYT	10-15 CYT	₹120-₹180
500 eligible CYT	50-75 CYT	₹600-₹900
1,000 eligible CYT	100-150 CYT	₹1,200-₹1,800

Worked examples are arithmetic illustrations, not confirmed individual entitlements or evidence that a future conversion request has been executed.

Eligibility and settlement

- The user must satisfy KYC, account integrity, purchased-power validity and any applicable anti-abuse controls.
- INR bank payouts and USDT on BSC (BEP20) share one monthly allowance; using one route reduces the amount available through the other in the same monthly period.
- A displayed conversion estimate is not a completed payment. Settlement requires an accepted transaction, sufficient eligible CYT and recorded confirmation.
- Any mined CYT not converted early remains in the user's eligible programme balance until subsequently available under applicable release rules.

10 / CYT WHITEPAPER

Free miners: direct CYT from November 2027

The free mining pathway does not include the 14 March 2027 early monthly cash or USDT conversion facility.

DIRECT TOKEN ACCESS DATE

26 November 2027: eligible free-only miners are scheduled to receive access to their available mined CYT as **CYT tokens**, through the supported direct token distribution / withdrawal process. This is not an automatic INR cash payout.

What a free-only participant should expect

- CYT earned through valid free-mining cycles is tracked in the separate Mining Balance before the token-access date.
- Each account's immutable personal free-mining cap limits additional free cycle rewards; it does not cancel previously credited eligible CYT.
- Free-only participants cannot use the March monthly 10%-15% conversion privilege unless they purchase qualifying Mining Power and satisfy its eligibility requirements.
- Token access on the release date will use the official supported network, verified token details and required security checks. Users should never send assets to an unverified contract address.
- A CYT token holding is different from an INR or USDT balance. Any later trading, sale or conversion depends on supported services and their respective rules.

What happens after an upgrade?

An eligible free miner may purchase Mining Power through the existing checkout. Their ongoing free cycle, if already started, finishes under its recorded terms. Subsequent cycles use the three-hour purchased-power reward; early conversion eligibility is then subject to the paid programme terms and release schedule.

NO RETROACTIVE RESET

Upgrading must not erase prior free CYT, welcome rewards or referral earnings. Neither the v2.0 publication nor a Mining Power purchase is a basis to reset historically earned balances.

11 / CYT WHITEPAPER

Participation, referrals and earned balances

Transparent account eligibility makes the Mining Programme easier to understand and harder to abuse.

Participation requirements

- Eligible CoinYatra account with completed KYC and applicable regional availability.
- One mining account per person. Duplicate accounts created to exploit welcome or referral bonuses may be restricted.
- Acceptance of the current Mining Terms, security controls and manual cycle initiation.
- Credits are recorded after successful server settlement; temporary display or connection errors do not create extra CYT.

PROGRAMME REWARD	CURRENT POLICY	ACCOUNTING NOTE
Welcome gift	2 CYT to eligible new miners	Separate from free mining cap
Ordinary referral	2 CYT for qualifying inviter	Separate from free mining cap
Agent referral — Pakistan	2 CYT for new eligible referral	Programme-specific terms
Agent referral — other regions	3 CYT for new eligible referral	Programme-specific terms

Historical referral and welcome rewards keep the rules that applied when earned. Eligibility, abuse checks and agent programme terms still apply.

Mining Balance versus wallet balance

A CYT Mining Balance records earned CYT units; it is not automatically an INR deposit, a USDT position or a bank balance. Displayed reference values are informational unless a supported conversion is completed and recorded. CYT mining rewards do not accrue interest merely by remaining in the Mining Balance.

> **ACCOUNTING INTEGRITY**
>
> CYT from purchased Mining Power is included in the relevant paid-cycle reward. Free cap calculations exclude unrelated welcome/referral bonuses and follow the authoritative lifetime mining ledger.

12 / CYT WHITEPAPER

The wider 200 million CYT framework

Keep the long-term distribution proposal visible without confusing it with the live per-user cap controls.

Version 1.1 described a proposed finite allocation of 200 million CYT with four cumulative programme phases. That economic design is retained here for continuity. **The milestone-based rate reductions and automatic pool cutoff are not represented as activated functionality.**

CUMULATIVE PROGRAMME DISTRIBUTION	PROPOSED FREE BASE	STATUS
0 to below 50 million CYT	1.00 CYT	Design framework
50 to below 100 million CYT	0.75 CYT	Not activated
100 to below 150 million CYT	0.50 CYT	Not activated
150 to below 200 million CYT	0.25 CYT	Not activated
At 200 million CYT	0.00 CYT	Programme ceiling concept

Critical separation

- **Live now:** free miners receive a base of 1 CYT per six-hour cycle until reaching their personal fixed cap. Eligible Mining Power users receive 1 CYT plus their owned power every three hours.
- **Not yet live:** automatic reductions to 0.75, 0.50 or 0.25 CYT based on the cumulative 200M allocation milestones.
- **Before future activation:** scope all reward sources included in the 200M ledger, complete audits and testing, and publish a dated policy amendment that explains effects on future cycles.

> **NO IMPLIED CHANGE TO PURCHASED POWER**
>
> Any later programme-wide emission design must clearly distinguish the owned permanent extra power from the adjustable free base, and must not quietly rewrite a previously completed mining cycle or paid entitlement.

13 / CYT WHITEPAPER

Roadmap and release milestones

CYT adoption is a sequence of discrete technical, operational and disclosure events.

13 NOV 2026

Live mining update

Six-hour free cycles, fixed caps and unchanged three-hour purchased-power cycles.

PRE-LAUNCH

Token readiness

Verify Solana SPL deployment, official mint details, token authority configuration and allocation disclosures.

01 FEB 2027

Token launch target

The retained programme target for the CYT token launch on Solana.

14 MAR 2027

Paid early conversion

10%-15% monthly INR/USDT allowance at INR 12 per CYT, restricted to eligible Power owners.

26 NOV 2027

Direct CYT access

Eligible mined CYT available for direct token access, including free-only miners.

FUTURE

Further ecosystem utility

Any additional market pair, external listing, application utility or phase change requires its own announcement.

OFFICIAL ANNOUNCEMENTS ONLY

Future exchange listings, trading pairs, liquidity partners, external wallets and regulatory milestones must not be represented as confirmed until formal public announcements and technical verifications exist.

14 / CYT WHITEPAPER

Operational safeguards and responsible AI

Correct settlement and predictable customer treatment matter as much as an attractive interface.

Backend-accountable mining

- Authoritative backend validation of start times, reward amounts, purchases, per-user caps and post-cycle settlement.
- Transaction-safe reward crediting, duplicate-cycle protection, auditable histories and recovery from interrupted requests.
- Explicit separation of free and purchased-power timing so policy changes do not silently affect paid owners.
- Durable records of purchased power, historical credits and current entitlements.

Account security and source-aware funds

CoinYatra's platform may apply transaction-source restrictions. For example, cryptocurrency bought using INR Direct Buy can have different external-withdrawal conditions from eligible P2P-acquired crypto. These are separate from CYT Mining release dates and must be communicated distinctly.

Chat and voice assistance

AI chat and voice assistants can help explain current Mining rates, individual caps, paid upgrades, participation, pricing and withdrawal eligibility. They should obtain current authorised context rather than repeating obsolete saved answers or presenting unexecuted requests as successful transactions.

USER CONTROL

Actions requiring access to funds or account changes require current permissions, explicit consent, confirmation and backend checks.

HUMAN ESCALATION

Support channels remain available for uncertain answers, payment issues, account concerns and Mining Power priority requests.

NO UNVERIFIED CERTIFICATION CLAIMS

The platform's stated design priorities do not by themselves establish independent financial auditing, insurance coverage, regulatory endorsement or guaranteed uninterrupted service.

15 / CYT WHITEPAPER

Economic commitments and material risks

Transparent policy and funding governance protect the distinction between recorded CYT and liquid redemption funds.

INR 12 early-conversion commitment

For eligible purchased-power miners, Version 2.0 records a fixed INR 12 per CYT early-conversion policy beginning 14 March 2027, within the 10%-15% monthly allowance. This is a material issuer programme obligation and needs operational funding, enforceable customer terms, financial controls and appropriate regulatory review.

If all 200 million CYT under the proposed mining allocation ever qualified for an INR 12 conversion, the arithmetic gross exposure would be INR 2.4 billion (INR 240 crore), before accounting for actual eligibility, timing, redeemed amount and service costs. This is a stress illustration, not an audited cash reserve or prediction of claims.

Sources of programme funding

The intended funding approach is company-generated profits and appropriately funded corporate reserves, kept separate from the custodial balances and unrelated investment principal of customers. Financial and legal verification should substantiate any external representation that the programme is fully funded.

Risks that remain relevant

RISK CATEGORY	WHAT PARTICIPANTS SHOULD UNDERSTAND
Market and liquidity	CYT market trading, price discovery and secondary liquidity are separate from the fixed eligible programme-conversion policy.
Execution and funding	Future conversion and token distribution require deployed services, adequate capital and correct settlement.
Security and custody	Wallets, smart contracts, custodians and transaction processing can experience compromise or disruption.
Tax and regulatory	Virtual digital asset rules, taxation, geography and KYC requirements can change.
Scope and implementation	The proposed four-stage pool policy and detailed token allocation are not yet active or fully specified.

16 / CYT WHITEPAPER

Questions, reference points and contacts

A concise reference for users, reviewers, community teams and AI-supported search experiences.

Is free Mining still three hours?

No. Eligible free mining is 1 CYT per completed six-hour cycle under the current programme.

Does reaching 75 CYT unlock 150 CYT?

No. Each free miner receives a fixed cap once. A 75 CYT cap stays 75 CYT.

What does Mining Power provide?

A permanent owned per-cycle CYT increment, three-hour cycles and eligible priority Mining support.

Can every miner convert CYT from 14 March 2027?

No. Early 10%-15% monthly INR / USDT conversion at INR 12 per CYT is for eligible purchased-power owners only.

When do free-only miners receive CYT tokens?

The stated direct CYT token access milestone is 26 November 2027.

Is INR 12 the spot market price of CYT?

No. It is the stated qualifying paid early-conversion rate; open-market price is a separate matter.
